

# DISCOVER ITALY

In the Footsteps of Galileo

**GULLIES  
TOURS**  
PASSION FOR TRAVEL

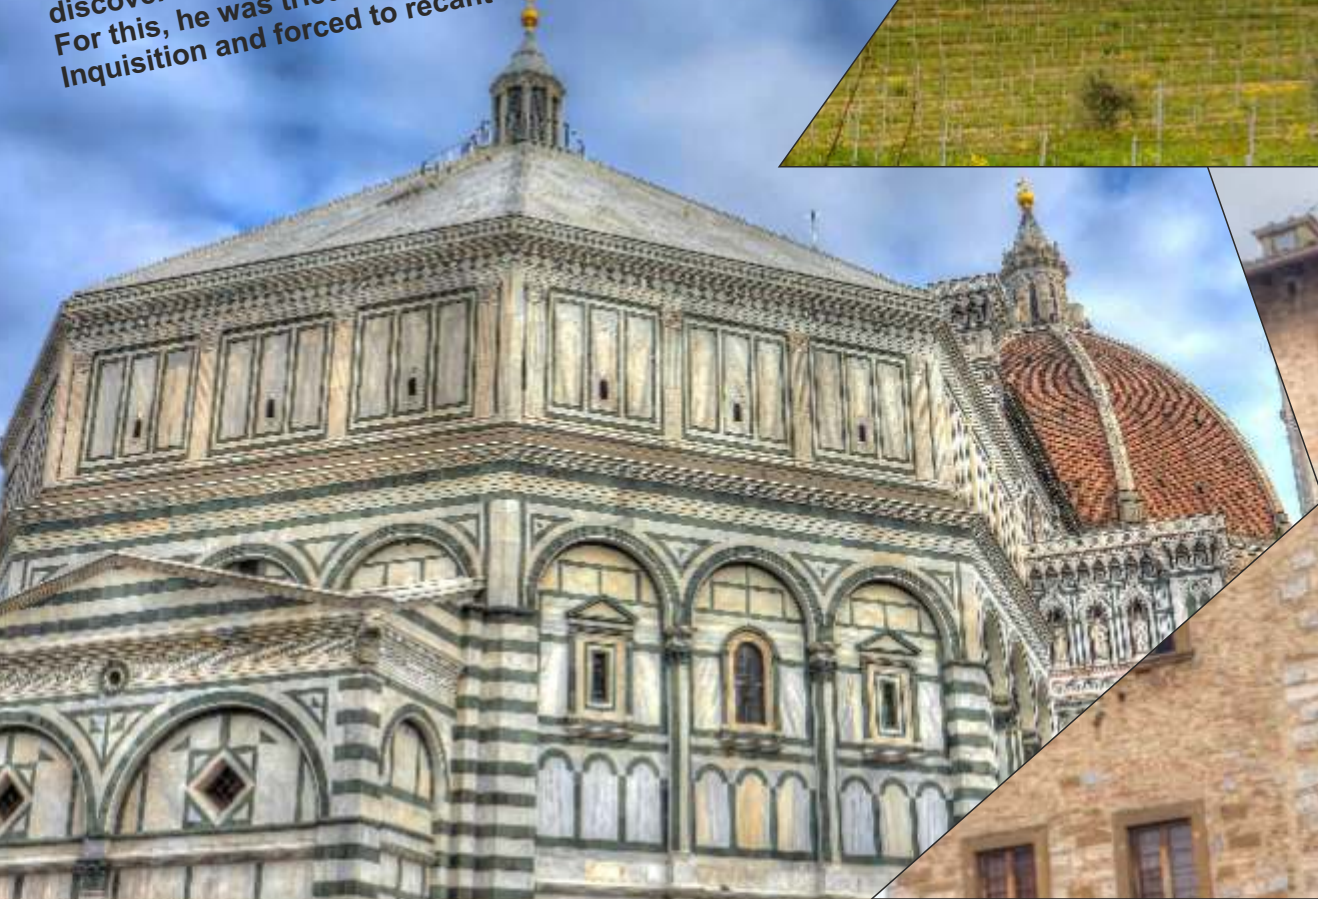

Galileo Galilei's discoveries shook the foundations of science during the later years of Europe's Renaissance and opened new doors to scientific understanding. On this specially arranged tour, discover Italy's most important Galilean landmarks, including Pisa, his birthplace; Padua, where he discovered Jupiter's moons; and Arcetri, where Galileo spent his last years under house arrest and wrote his most seminal work. Take an in-depth look at one of the world's early astronomers.

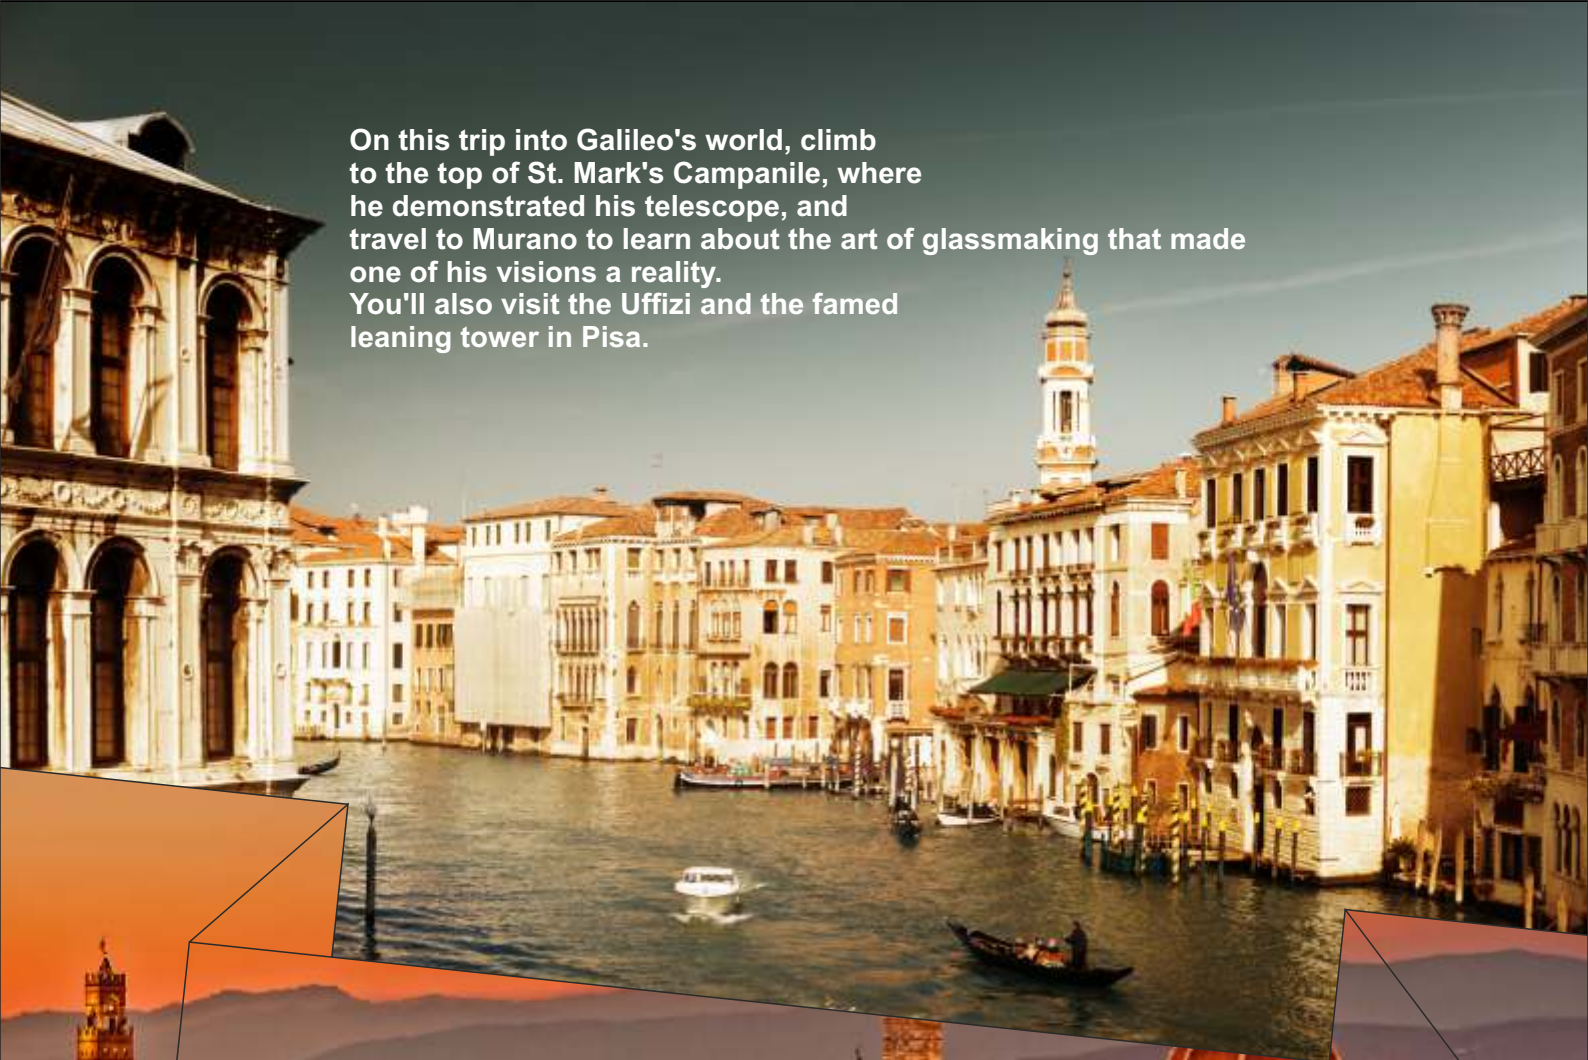

This Renaissance man improved the then-primitive telescope; tried to persuade the world that the Earth revolved around the sun, not vice versa; and discovered that Jupiter had moons. For this, he was tried for heresy by the Inquisition and forced to recant his findings.

On this trip into Galileo's world, climb to the top of St. Mark's Campanile, where he demonstrated his telescope, and travel to Murano to learn about the art of glassmaking that made one of his visions a reality. You'll also visit the Uffizi and the famed leaning tower in Pisa.
